The following documents are referred to in this report:

D1 : Journal of Agricultural and Food Chemistry, 2002, 50(24), pp.7182-6

D2 : Journal of Biological Chemistry, 2002, 277(38), pp.34933-40

D3 : JP 2003-128571 A2(08 May 2003)

D4 : US 4544550 A (01 October 1985)

The present invention relates to a hypoglycemic composition containing polyphenol extracted from green tea and calcium.

D1 discloses that polyphenol in tea increases insulin activity and its predominant active ingredient is epigallocatechin gallate. D2 discloses that the regulation of hepatic glucose production is decreased by epigallocatechin gallate, the green tea flavonoid and suggests a potential role for epigallocatechin gallate as an antidiabetic agent. D3 describes the diabetic medicine and the health food having a hypoglycemic activity which contains green tea extract. In D4, a method for treatment of diabetes is disclosed, wherein blood sugar is lowered when an energizer composition containing proteins, carbohydrates, minerals(including calcium pantothenate and calcium), vitamins and thyroglobulin is administered to the patient.

1. Novelty

Although D1- D4 disclose hypoglycemic composition containing polyphenol or calcium, none of the prior art discloses the combination of polyphenol and calcium. Therefore, the present invention can be considered novel.

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

2. Inventive Step

Because D4 discloses a hypoglycemic composition containing calcium as one of 20 components or more, it is not obvious to a skilled person in the art to select calcium for a combination with polyphenol. Moreover, the present invention has an unexpected synergic effect by a combination of polyphenol and calcium. Therefore, an inventive step can be acknowledged for the present invention.

3. Industrial applicability

The present invention is considered to be industrially applicable.
